

wiTTyMindsTech
SCHOOL OF AI

2026 INTAKE

ALL-IN-ONE EDUCATIONAL PROGRAM

Master Generative AI End to End

From absolute basics to building your own LLMs, GPTs, custom apps and autonomous AI agents — coding alongside **Copilot, Cursor and Claude** — in 10 focused hours, with mentors beside you at every step.

10 Weekly Sessions · 1 Hour

Live 1:1 + Group

Lifetime Recordings

06

CORE MODULES

10+

PROJECTS BUILT

08+

AI DEV TOOLS

LIFETIME SUPPORT

For Entrepreneurs

Launch AI products, cut costs, automate operations

For Job Seekers

Build a portfolio that makes recruiters call you back

LIFETIME MEMBERSHIP · LIFETIME SUPPORT · LIFETIME ACCESS

WHAT YOU WILL MASTER

Six Pillars, One Complete Journey

Every pillar is hands-on. You do not just watch — you build, break, fix and ship a working asset in each stage of the program.

01

Basics of AI & Generative AI

How models actually think — tokens, embeddings, transformers, prompting. Demystified with zero maths and zero jargon, so every later module clicks.

02

Build Your Own LLM

Data preparation, fine-tuning, embeddings and RAG pipelines. Train a language model on your own domain knowledge and evaluate it like a professional.

03

Build Your Own GPT

Design a custom GPT with your own instructions, knowledge base and tools — then publish it so clients, teams or customers can use it directly.

04

Code With Copilot, Cursor & Claude

Write, refactor, debug and **review code** with AI pair programmers — shipping production-quality work even without a dev background.

05

Custom Apps & Websites

Turn ideas into live products using AI-assisted development. Ship a real website and an AI-powered app with authentication, database and deployment.

06

AI Agents & Automation

Build autonomous agents that handle email, reports, research, leads and daily workflows — reclaiming hours of manual work every single week.

HOW YOU LEARN

Three Ways, Every Week

LIVE 1:1

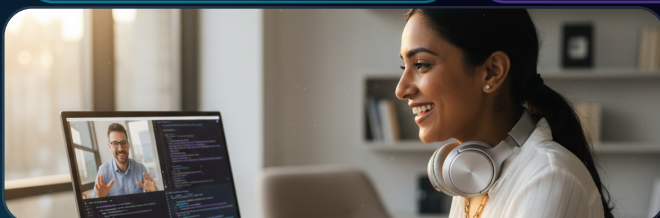

Private mentor time on your own project, doubts and career path.

LIVE GROUP

Build alongside peers, review each other's work, grow your network.

RECORDED

Revisit every session forever, at your own pace.

10 Weeks • 10 Sessions

PART 1 / Weeks 1–5

One hour a week. Each session mixes a live walkthrough, hands-on build time and a take-home asset you keep forever.

WEEK 01

01

AI Foundations & The GenAI Landscape

What AI, ML, deep learning and GenAI really mean. Tour the tool ecosystem — ChatGPT, Claude, Gemini, Midjourney — and set up your complete AI workspace.

OUTCOME • YOUR AI TOOLKIT, LIVE

WEEK 02

02

Prompt Engineering That Gets Results

Move from casual prompts to reliable systems — role, context, constraints, chain-of-thought and reusable prompt templates for your work or business.

OUTCOME • PERSONAL PROMPT LIBRARY

WEEK 03

03

Inside an LLM — How Models Think

Tokens, embeddings, context windows, temperature and hallucinations explained visually. Understand why models fail so you can engineer around it.

OUTCOME • MODEL EVALUATION SHEET

WEEK 04

04

Build Your Own LLM — Data & Fine-Tuning

Collect and clean your domain data, then fine-tune a base model. Learn when fine-tuning wins and when retrieval is the smarter, cheaper choice.

OUTCOME • YOUR FINE-TUNED MODEL

WEEK 05

05

RAG & Vector Databases

Give your model private knowledge. Build a retrieval pipeline over documents with chunking, embeddings and a vector store — the backbone of every AI product.

OUTCOME • CHAT WITH YOUR OWN DOCS

Halfway checkpoint: by Week 5 you already have a working AI assistant trained on your own knowledge — before writing a single line of production code.

Build. Ship. Automate.

PART 2 / Weeks 6–10

The second half is pure creation — coding with AI assistants, reviewing your own work like a senior engineer, and shipping products that keep running after Week 10.

WEEK 06

06

Build Your Own GPT

Create a custom GPT end to end — instructions, knowledge files, actions and guardrails. Test it, refine its personality, then publish and share it.

OUTCOME · A PUBLISHED CUSTOM GPT

WEEK 07

07

Code With Copilot, Cursor & Claude

Set up GitHub Copilot, Cursor and Claude as your pair programmers. Scaffold features from plain English, refactor safely and debug errors in minutes.

OUTCOME · YOUR AI DEV ENVIRONMENT

WEEK 08

08

AI Code Review & Custom Apps

Use AI to review code for bugs, security and readability, write tests, then ship a real app and website — login, database, APIs and cloud deployment.

OUTCOME · REVIEWED, DEPLOYED APP

WEEK 09

09

AI Agents — Your Digital Workforce

Understand agent architecture: goals, memory, tools and multi-step reasoning. Build your first agent that researches, decides and acts on its own.

OUTCOME · A WORKING AI AGENT

WEEK 10

10

Automate Your Day & Launch

Connect agents to email, sheets, CRM and messaging to automate daily work. Finish with your portfolio, pricing and go-to-market or interview plan.

OUTCOME · AUTOMATION SUITE + PORTFOLIO

You graduate with: a fine-tuned model, a published GPT, an AI-assisted dev workflow, a live website, a reviewed and deployed app, working agents and a portfolio.

Build & Review Code With AI

You will not just prompt chatbots — you will work the way modern engineering teams actually work: an AI assistant writing alongside you, and a second AI reviewing everything before it ships.

TOOLS YOU WILL MASTER

GitHub Copilot

Inline autocomplete, whole-function generation and instant unit tests inside your editor.

Cursor

An AI-native editor that understands your whole codebase and edits many files at once.

Claude

Long-context reasoning for architecture, deep refactors and rigorous code review.

ChatGPT & Gemini

Rapid prototyping, data work and second opinions on tricky logic.

Replit & v0

Spin up and host working apps and UIs straight from a prompt.

Git & CodeRabbit

Version control plus automated AI pull-request reviews on every change.

THE AI CODE REVIEW WORKFLOW

1

Describe

Explain the feature in plain English

2

Generate

Copilot or Cursor writes the code

3

Review

Claude audits bugs and security

4

Test

Auto-generate and run test cases

5

Ship

Commit and deploy with confidence

No computer science degree required. You learn to direct and verify AI-written code — reading it critically, catching what the AI gets wrong, and owning what you ship.

BEYOND THE 10 WEEKS

Lifetime Membership & Support

Enrol once and stay a member for life. AI changes every month – your access, your recordings and your mentors keep pace with it, at no extra cost.

Unlimited Replays

Every recorded session, updated as tools evolve. Rewatch any module forever.

Mentor On Call

Stuck on a client project months later? Bring it to your mentor and solve it.

Alumni Community

A private network of founders and professionals sharing work, leads and referrals.

Templates & Toolkits

Prompt libraries, agent blueprints, code-review checklists and app starters.

Free Future Updates

New modules on new models and tools are added to your account automatically.

Career & Launch Help

Portfolio reviews, interview prep, pricing guidance and product feedback.

WHO THIS IS BUILT FOR

Entrepreneurs

- Launch AI products without hiring developers
- Automate operations and cut costs
- Add AI services to your offering
- Scale output without scaling headcount

Job Seekers

- Ship AI projects reviewed to industry standard
- Switch into high-demand AI roles
- Speak confidently in AI interviews
- Freelance with in-demand skills

SEATS ARE LIMITED PER BATCH
